BD Nexiva™  
closed IV Catheter System  
- Single Port

## The right size. The right length.

Difficult veins present an on-going challenge to peripheral IV catheter access. Having the right size and the right length right from the start facilitates IV placement— especially when ultrasound-guided placement is required. Rapid and accurate placement of a peripheral IV can improve patient satisfaction and reduce the need for a central line with its associated risks.

BD is pleased to welcome the 1.75 in. length to the 22 G Nexiva family. This new length expands the portfolio offering for all Nexiva customers. No need to look elsewhere for longer lengths. We've got what you need.
