CUTICERIN[®]
Low Adherent Impregnated
Dressing

The impregnated gauze for
superficial, exuding wounds

CUTICERIN[◊] impregnated gauze for superficial, exuding wounds

CUTICERIN is an impregnated, non-aqueous, non-linting dressing ideal as a wound contact layer. It reduces the risk of granulation tissue growing through the dressing, decreasing trauma on removal.

Advantages

Low adherent

Made from a smooth acetate fabric with a defined mesh size and water-repellent ointment coating¹.

Breathable

CUTICERIN allows air and wound exudate to pass freely through the dressing.

Application

- Place CUTICERIN directly onto the wound and cover with a secondary dressing
- CUTICERIN may be cut to the shape of the wound if required

Presentation

CUTICERIN is sterile and individually sealed.

Indications

For the management of superficial, exuding wounds, such as;

- Minor burns
- Radiation injuries
- Abrasions
- Split-thickness skin graft donor sites
