3M™ Cavilon™ Advanced Skin Protectant

**Finally, you have
the power to end
Incontinence-Associated
Dermatitis (IAD).**

Some technologies change the way we work.
Some change the way we communicate.
Some change the standard of care... *forever.*

As a clinician, you're well aware that Incontinence-Associated Dermatitis (IAD) – and especially severe Category 2 skin injury – presents a special challenge. Not only is it a miserable experience for patients and residents, but IAD can also increase the risk of complications, such as secondary infections and pressure injuries.

35%

of cases in the acute care setting include moderate to severe IAD.¹

Up to **41%** of nursing home residents have IAD.²

The challenge with severe IAD management.

Rich in enzymes and with an alkaline pH, liquid stool is a powerful irritant that can easily disrupt normal skin integrity. Severe inflammation follows and – where epidermis is destroyed – the result is a wet, weepy surface that can also bleed and cause pain to your patient.

Until now, traditional pastes have been the only option for protecting this damaged tissue. After using these products, you're well aware of their limitations:

- Thick, gritty texture can make application and removal messy and painful³
- Skin is left unprotected when product doesn't stay in place
- Product can dry, cake and clump over time, making cleansing and removal difficult and uncomfortable for the patient and time-consuming for you³
- Inability to visualise the underlying skin⁴
- Frequent reapplication required
- Prophylactic sacral dressings won't adhere

**But now,
there's a
solution...**

Now you have the power to stop, reverse and prevent IAD.^{5,7}

Introducing 3M™ Cavilon™ Advanced Skin Protectant – a novel formulation that incorporates breakthrough science for skin protection.

How it works:

Cavilon Advanced Skin Protectant combines a unique polymer system with a cyanoacrylate to create a highly durable, ultra-thin, transparent barrier with *elastomeric* properties.^{5,6} This barrier has the power to:

- ✓ Protect against caustic, corrosive body fluids, including liquid stool or gastric fluid⁵
- ✓ Flex and stretch while in place, providing waterproof⁶, irritant-proof skin protection for your patients and residents – even under the most challenging conditions⁵
- ✓ Attach to wet, weepy damaged skin surfaces⁵
- ✓ Create a protective environment that supports healing and helps reduce pain associated with IAD⁵

Additional benefits for you, and your patients and residents:

- ✓ Avoid the need for frequent reapplication⁵
- ✓ Allows easy, gentle cleansing with *no removal required*
- ✓ Easy-to-use, single-use applicator makes application fast and reduces the potential for cross-contamination possible with traditional products

3M™ Cavilon™ Advanced Skin Protectant can make a difference.

For your patients and residents:

- Reduces the pain associated with managing IAD⁵
- Creates an environment for healing moderate to severe IAD⁷
- Prevents skin injury and maintains skin integrity⁵
- Improves the overall healthcare experience

For your facility:

- Leads to improved patient and resident outcomes⁵
- Offers a cost-effective solution for the management and prevention of IAD

For you:

- Reduces overall time spent on the prevention and management of IAD and other types of skin damage⁸
- Allows you to provide a treatment that reduces the pain experienced by your patients and residents⁵
- Supports infection-control initiatives

The proof is in the numbers.

Cavilon Advanced Skin Protectant was used in a clinical study.⁵ The results speak for themselves.

96%

The median percent improvement in IAD severity score.

100% of patients

100% of patients who reported pain associated with IAD on Day 1 (n=9), saw a reduction in pain with the use of Cavilon Advanced Skin Protectant.

IAD has finally met its match.

3M™ Cavilon™ Advanced Skin Protectant has been shown to significantly improve severe cases of IAD – even in the presence of continued incontinence.

Application
required only

2-3x
per week*

Reasons to use Cavilon Advanced Skin Protectant...

Incontinence Assault (Urine/Stool)

Easy to cleanse and enables healing as skin is left undisturbed

Protects damaged skin, enabling healing to occur⁷

Instead of traditional moisture barriers which have limitations.

Incontinence Assault (Urine/Stool)

Difficult/abrasive cleansing + frequent application required

Healing may be delayed¹⁰

* Testing has shown that Cavilon Advanced Skin Protectant can remain effective for up to 7 days.⁹

**Combining our expertise
with your clinical needs.**

Science and collaboration are at the heart of everything 3M creates to make life better. In keeping with this tradition, expert 3M chemists partnered with leading clinicians and IAD experts to develop Cavilon Advanced Skin Protectant. It features a unique chemistry that achieves elasticity of the polymer system, assuring greater barrier integrity and durability.

The IAD severity score from enrolment to study end improved in more than 80% of patients.⁵

Cavilon Advanced Skin Protectant – the difference is clear.

Cavilon Advanced Skin Protectant can also be used to:*

- ✓ Prevent IAD in high-risk patients and residents
- ✓ Manage moderate to severe skin damage around ostomies, tube and drain sites and fistulas
- ✓ Prevent skin damage around ostomies, tube and drain sites and fistulas in high-risk patients and residents
- ✓ Manage superficial skin injuries in difficult-to-dress locations

* Refer to instructions for use

Revolutionising the science of skin protection.

It's time to think differently. It's time to take a stand to protect your patients and residents from the pain of IAD. Because now, you have the power to change the standard of IAD care forever.
